

Pipefusion creates new 'Niche' producing Docks and Pontoons with Polyethylene Pipe!

One particularly innovative modification allows a dock, or a portion of it, to unclip from the main dock and become a sturdy 'dock boat' for cruising Muskoka's lakes and rivers

Pipefusion Services Inc., is an international supplier for polyethylene pipe, fittings, fusion services, and pipe joining equipment, based right here in Huntsville. Owner Jan Nyquist, who founded the company in 1981, is not one to rest on his laurels. Nyquist explains, "One of the the most exciting new areas of business is the floating docks and pontoons which are now produced by the company. The same expertise, care, proprietary knowledge and equipment that is used to fuse the pipes in traditional piping applications are now being used by Pipefusion to produce unique polyethylene docks and pontoons right here in Huntsville."

Customers have the option to buy the pontoons and build their own dock or to purchase a complete dock package and have it delivered and installed by Pipefusion right on their own shoreline. One particularly innovative modification allows a dock, or a portion of it, to unclip from the main dock and become a sturdy 'dock boat' for cruising Muskoka's lakes and rivers.

For nearly three decades Pipefusion has been involved in literally every type of polyethylene pipe installation imaginable in markets as far flung as CFB Alert in the NWT to Hawaii, California, Mexico, Bermuda, New York City, the Yukon and the Dominican Republic to name a few regions. "It's not always unique and exotic locations where we do our work," says Nyquist. He has personally spent a substantial portion of his life working long hours for weeks on end in remote northern mining communities (often in grueling weather conditions) fusing pipe with the specialized fusion machines.

The polyethylene pipe often carries hazardous effluent in environmentally sensitive areas and it simply cannot fail. The financial consequences of a failure of these pipelines and the subsequent environmental fines and back charges by the companies utilizing the pipeline system would be so enormous that it could potentially be in the millions of dollars. "Suffice it to say, we would be out of business." Nyquist adds, "It's a risk I have lived with

through my entire career." It's not surprising that Nyquist is very excited about the hazard-free production of his new polyethylene dock and pontoon line!

Nyquist give much credit to his dedicated staff. "When I decided to expand the company, I knew that we could do our traditional work and this new line thanks to my hard-working, talented and dedicated employees. It's due to their efforts that we are able to grow to this stage and achieve a higher level of business. We've all been challenged and I believe that we've become better people as a result." He adds, "It's been extremely rewarding."

If you have not already done so, take a trip out and visit the people at Pipefusion Services to view the floating docks and pontoons. The possibilities for this product are endless. The only limit is your imagination.

Pipefusion Services is located at 1029 Aspdin Road in Huntsville, 4 km. west of Hwy. 11 on Muskoka Road 3.

PIPEFUSION

SERVICES INC.
